

## CIP Automation That Pays Off

Improve Efficiency, Reduce downtime, and save money.

### MODERN CIP SYSTEMS: THE SMARTER WAY TO CLEAN

Automated Clean-in-Place (CIP) technology replaces labor-intensive manual cleaning with consistent, repeatable cycles—no disassembly required. For facilities of all sizes, the benefits are clear:

- Dramatically reduced cleaning time/labor,
- Lower chemical and utility costs,
- Standardized processes with automated data logging,
- Fewer compliance headaches,
- Higher levels of safety
- Builds employee morale.

Today's modular systems can be engineered to fit your operation without a full infrastructure overhaul. The question isn't if automated CIP makes sense; it's what waiting is costing you.

### REPEATABLE RESULTS

Automation removes the variables of manual cleaning. By combining precision-engineered equipment with advanced automated controls, modern CIP systems provide a seamless, push-button sanitation solution.

### RECLAIMING LOST HOURS ON THE PRODUCTION FLOOR

A typical mid-sized industrial manufacturer could lose nearly 6 hours per shift to manual cleaning, inconsistent procedures, excess chemical use, and zero documentation to show for it. After installing a custom automated CIP system, cleaning cycles drop to under 90 minutes with full PLC-controlled consistency and automatic cycle logging. The result: over 4 hours of reclaimed production time per shift, measurable chemical savings, and a process any team can actually rely on. Same facility, same equipment, just a smarter way to clean.

### NO PAIN MORE GAINS

Let's be honest: nobody ever woke up excited to spend four hours hand-scrubbing a heat exchanger or climbing into a mash tun with a spray hose. Manual cleaning is the "leg day" of the production world, essential but exhausting and easy to skip if you're tired.

Modern CIP systems don't just save money; they save morale. When the machines handle the caustic and the timers, your team can focus on the craft, the quality, and the next batch. By integrating precision-engineered equipment with automated CIP controls, you can turn your facility's toughest workout into a push-button warm-up

### LEARN THE RETURNS

Ready to see how much time your floor is leaving on the table? Call us to set up an appointment, We'll help you calculate exactly how many hours (and gallons) you can reclaim. Or you can just use our free CIP ROI Calculator and start saving time and money before you even purchase a CIP system. Click the Link Below
